

Sargis Sargsyan

SENIOR FRONTEND / PLATFORM ENGINEER

Professional Summary

Senior Frontend / Platform Engineer with 15+ years of experience building production web applications, reusable frontend architecture, client platforms, and developer tooling. Strong in TypeScript, JavaScript, browser performance, state-heavy interfaces, API integration, build systems, and CI/CD. Experienced owning systems from architecture through production, improving developer workflows, mentoring engineers, and delivering reliable, high-performance experiences across devices.

Employment History

Frontend Team Lead, Ixilix

FEB 2026 — MAY 2026

Led frontend engineering across multiple browser-based products, owning architecture, feature delivery, performance, and release readiness.

- Built reusable UI systems, responsive layouts, real-time interfaces, profile flows, analytics events, and backend-integrated features using React, TypeScript, and PixiJS.
- Improved shared frontend architecture, component reuse, mobile behavior, code quality, and production stability across multiple product variants.
- Reviewed code, planned technical work, mentored developers, and coordinated frontend, backend, QA, animation, design, and product teams.
- Optimized assets, requests, loading, memory usage, and runtime behavior for lower-end mobile devices, reducing one package from approximately 62 MB to 9.6 MB.

Technical Lead, Playrix, Yerevan

JUN 2025 — JAN 2026

Led development of a reusable frontend framework and production platform for high-performance browser experiences.

- Designed shared architecture, runtime modules, reusable templates, asset-loading systems, and developer tooling using TypeScript and modern web technologies.
- Improved build pipelines, asset processing, bundle size, loading performance, and runtime efficiency across production projects.
- Reduced package size from approximately 4.2 MB to 1.4 MB and loading time from approximately 2.5 seconds to 1.6 seconds.
- Built tooling and automation that reduced repetitive implementation work and improved developer productivity.
- Established engineering standards, review practices, and delivery workflows that improved maintainability and release reliability.

Senior Game Engine Developer, RubyPlay

SEPT 2024 — JUN 2025

Developed reusable browser-based client systems and shared platform components for production applications.

- Built runtime modules, state-management systems, asset-loading workflows, configuration layers, integrations, and release tooling.
- Improved platform performance, runtime stability, observability, and release reliability across multiple production titles.
- Integrated Sentry and strengthened error tracking, debugging workflows, monitoring, and production diagnostics.
- Resolved rendering, loading, integration, and runtime issues in collaboration with backend, QA, product, and design teams.

Lead HTML5 Game Developer, Voodoo

SEPT 2023 — SEPT 2024

Led development of high-performance browser applications for mobile web and third-party platforms.

- Built responsive, animation-rich interfaces and reusable frontend systems using JavaScript, TypeScript, Canvas, and WebGL.
- Created technical templates and shared implementation patterns that accelerated delivery across multiple projects.
- Optimized loading, asset size, runtime performance, and cross-device behavior for mobile browsers.
- Collaborated with design, product, creative, and marketing teams to turn interaction concepts into production-ready experiences.
- Reviewed technical solutions and supported developers across implementation, debugging, and release.

Co-Founder & CEO, Armath (formerly Koreez), Yerevan

JAN 2016 — SEPT 2023

Co-founded and led a software studio delivering web, mobile, and interactive products for international clients.

- Defined product direction, frontend architecture, development processes, hiring plans, and delivery workflows.
- Built reusable application foundations, shared components, internal tools, and production systems supporting multiple projects.
- Led multidisciplinary teams across engineering, design, art, QA, and production from concept through release.
- Managed client relationships, project delivery, publishing, and live support while remaining hands-on with engineering.
- Improved development speed, consistency, and product quality through reusable technical patterns and standardized workflows.

Senior Software Engineer, Rockbite, Yerevan

JUN 2014 — MAY 2015

Developed cross-platform applications and internal development tools for iOS and Android.

- Built user interfaces, application features, and platform-specific functionality using Java, libGDX, and RoboVM.
- Contributed to Overlap2D, a visual editor and production tool supporting reusable scene and asset workflows.
- Developed internal systems that improved content creation, cross-platform delivery, and production efficiency.

Game Developer, Plexonic, Yerevan

JAN 2011 — JUN 2014

Developed cross-platform interactive applications for iOS, Android, and Facebook.

- Built user interfaces, application logic, animations, and reusable components using ActionScript, Adobe AIR, and Flash.
- Delivered production features across multiple products and platforms.
- Collaborated with design, backend, and QA teams throughout development, testing, and release.

Education

M.Sc. & B.Sc., Mathematics & Computer Science, National Polytechnic University of Armenia
