

Sargis Sargsyan

TECHNICAL LEAD / ENGINEERING LEAD

Professional Summary

Technical Lead / Engineering Lead with 15+ years of experience building software products, leading engineering teams, and driving architecture, delivery, and technical strategy. Strong hands-on background in TypeScript, JavaScript, frontend systems, browser performance, developer tooling, and production platforms. Experienced mentoring engineers, reviewing code, improving workflows, coordinating cross-functional teams, and delivering reliable products from planning through production.

Employment History

Frontend Team Lead, Ixilix

FEB 2026 — MAY 2026

Led frontend engineering across multiple browser-based products, owning technical direction, delivery, performance, and production readiness.

- Reviewed architecture and code, planned technical work, mentored developers, and supported day-to-day engineering decisions.
- Coordinated frontend, backend, QA, animation, design, and product teams across feature delivery, releases, and production fixes.
- Improved shared architecture, reusable components, engineering workflows, code quality, and release stability across multiple product variants.
- Remained hands-on with React, TypeScript, and PixiJS, delivering real-time interfaces, responsive layouts, analytics, and backend-integrated features.
- Reduced one production package from approximately 62 MB to 9.6 MB through asset, loading, request, memory, and runtime optimization.

Technical Lead, Playrix, Yerevan

JUN 2025 — JAN 2026

Led architecture, engineering standards, and delivery improvements for a reusable HTML5 production platform.

- Defined technical direction for shared framework modules, asset pipelines, development tooling, and reusable implementation patterns.
- Reviewed architecture and code, supported engineers, and improved consistency across production projects.
- Built automation and internal tools that reduced repetitive work and accelerated delivery.
- Improved build size, loading performance, runtime efficiency, and release reliability across lower-end mobile devices.
- Coordinated engineers, artists, QA, producers, and creative stakeholders from planning through production.

Senior Game Engine Developer, RubyPlay

SEPT 2024 — JUN 2025

Provided technical ownership for shared game-engine systems, production reliability, and cross-team delivery.

- Designed and improved reusable runtime modules, configuration systems, integrations, and release tooling.
- Supported architecture decisions, code reviews, debugging, and production issue resolution across multiple projects.
- Improved performance, observability, runtime stability, and release reliability.
- Integrated Sentry and strengthened monitoring, diagnostics, and error-tracking workflows.
- Collaborated with backend, QA, product, game design, and engineering teams on framework updates and releases.

Skills

- Technical Leadership
- Engineering Strategy
- System Architecture
- Frontend Architecture
- Technical Planning
- Code Reviews
- Mentoring
- Cross-Functional Delivery
- Process Improvement
- Developer Tooling
- Performance Optimization
- Production Reliability
- Release Management
- Stakeholder Collaboration
- Engineering Mentorship

Lead HTML5 Game Developer, Voodoo

SEPT 2023 — SEPT 2024

Led technical delivery for multiple browser-based interactive projects, balancing architecture, performance, team support, and production deadlines.

- Defined implementation approaches, reusable patterns, and technical standards across projects.
- Reviewed solutions, supported developers, and helped resolve complex rendering, performance, and integration issues.
- Improved production speed through reusable systems, technical templates, and streamlined workflows.
- Coordinated engineering, design, art, creative, product, and marketing stakeholders from concept through release.
- Remained hands-on with JavaScript, TypeScript, Canvas, and WebGL while optimizing loading, asset size, and mobile runtime performance.

Co-Founder & CEO, Armath (formerly Koreez), Yerevan

JAN 2016 — SEPT 2023

Co-founded and led a game development studio, owning technical strategy, team building, product direction, and delivery for international clients.

- Led multidisciplinary teams across engineering, design, art, animation, QA, and production.
- Defined architecture, development standards, hiring plans, roadmaps, and delivery processes.
- Mentored engineers, reviewed technical solutions, and remained hands-on with implementation and problem-solving.
- Managed client relationships, project scope, priorities, publishing, and live support.
- Built reusable systems, internal tools, and production workflows that improved delivery speed and consistency.
- Contributed to internationally released titles including *Roofbot* and *Parallyzed*.

Senior Software Engineer, Rockbite, Yerevan

JUN 2014 — MAY 2015

Contributed to cross-platform game development and internal production tooling for iOS and Android.

- Built gameplay, UI, and platform-specific systems using Java, libGDX, and RoboVM.
- Contributed to Overlap2D, a visual editor and production workflow for 2D game development.
- Designed reusable tools and systems supporting scene creation, asset workflows, and cross-platform delivery.

Game Developer, Plexonic, Yerevan

JAN 2011 — JUN 2014

Developed cross-platform games for iOS, Android, and Facebook.

- Implemented gameplay systems, UI flows, animations, and reusable components using ActionScript, Adobe AIR, and Flash.
- Collaborated with design, backend, art, and QA teams throughout development and release.
- Built production-ready features across multiple titles and platforms.

Education

M.Sc. & B.Sc., Mathematics & Computer Science, National Polytechnic University of Armenia
